Overview

Nest CLI is a command-line interface tool that helps you to initialize and develop your applications. It helps on many grounds at once, from scaffolding the project to building well-structured apps. The Nest CLI is based on the Angular Devkit package.

Installation

Install the CLI using **NPM**:

```
$ npm install -g @nestjs/cli
```

Basic workflow

Once the installation process is finished, you should be able to invoke CLI commands directly from your command line through the `nest` executable. In order to get a list of available functionalities, use the following command:

```
$ nest --help
```

Contribute

You can participate and contribute to the project here.

Support us

Nest is an MIT-licensed open source project. It can grow thanks to the support by these awesome people. If you'd like to join them, please read more here.
