

## Hybrid application

The hybrid application is an application that listens to HTTP requests, as well as makes use of the connected microservices. The `INestApplication` can be combined with the endless number of the `INestMicroservice` instances through `connectMicroservice()` method.

```
const app = await NestFactory.create(ApplicationModule);
const microservice = app.connectMicroservice({
  transport: Transport.TCP,
});

await app.startAllMicroservicesAsync();
await app.listen(3001);
```

## Support us

Nest is an MIT-licensed open source project. It can grow thanks to the support by these awesome people. If you'd like to join them, please read more [here](#).
