

Global prefix

In order to set a prefix for each route registered in the HTTP application at once, you can use the `setGlobalPrefix()` method of the `INestApplication` instance.

```
const app = await NestFactory.create(ApplicationModule);
app.setGlobalPrefix('v1');
```

Support us

Nest is an MIT-licensed open source project. It can grow thanks to the support by these awesome people. If you'd like to join them, please read more [here](#).
